

The walking floor trailer is very universal. It enables the company to transport the goods which were used to transport by the use of semi-curtain trailer, semi-trailers and tipper semi-trailers. The goods placed on pallets can be loaded and unloaded in a traditional way through the back doors using a pallet truck, a fork lift truck or by the use of the movable floor. The system of movable floor does not require the use of a ramp for the loading and unloading process. In addition the crucial advantage of the walking floor trailer is the rigid structure of its side walls what makes the walking floor trailer to be safer in terms of theft and transport of good.
